

Home Artificial Insemination Process

The Hallasan Artificial Inseminator is designed to be used by anybody.

It's improved safety is due to complete separation of an operator from a cow by placing semen injector inside the vaginal insertion tool – there is no need to insert your arm.

Semen is injected while the image of the uterus cervix can be viewed through the mirror in the vaginal insertion tool

Less time – even an amateur can use the AI within 1 to 10 minutes.
